Safety Tension Device

In response to growing concern from window covering chains and cords causing strangulation or other potential problems, **CIERA Industries Inc.** is proud to introduce a Safety Tension Device. The new modern design is stylish, easy to install and quiet in operation with large transition radiuses allowing beads and connectors smoothly pass through the central round opening.

- Works with cords, bead chain, connectors and ball stops
- Bead chain loops can be pre-attached to safety device
- Locks completely if not secured properly
- Quick and easy installation
- Patent pending design
- Tension devices available in

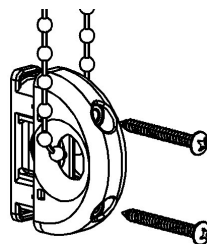

with matching color screws

Safety devices are designed to minimize the hazards of strangulation and entanglement of small children by restricting access to the cord or chain control. The tension device is sent from the factory already attached to each cord or chain loop.

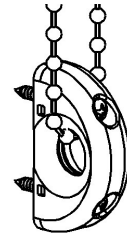

Critical Note: The safety device should be installed so that the bead chain and bead stop balls move smoothly through the opening of the device. Removal of this device or failure to properly install it, can cause damage to the clutch lifting mechanism and will result in the voidance of the product's limited lifetime warranty.

Installation Instruction:

The safety devices are already attached to the bead chain. Stretch the bead chain lightly and secure it to the wall or window with screws provided

Before securing safety device to the wall, the chain cannot be operated

After fixing it to the wall, the chain works freely.
